**FOR IMMEDIATE RELEASE**

**Lindapter® solves steel connection problems with no drilling or welding.**

When it comes to fabricating steel-to-steel connections, welding is often the default option. But in many applications, the use of fasteners can provide a faster, more cost-effective alternative that eliminates the time and cost of drilling or welding.

Lindapter® steel connecting solutions can be installed with standard hand tools, dramatically reducing the time required for installation, and greatly simplifying the inspection process. Other benefits of these clamping solutions include reduced labor costs, and on-site adjustability, with no potential damage to steel sections.

**Certified Steel Connections**

All-Pro Fasteners of Arlington, Texas, offers a complete lineup of Lindapter® solutions to serve customers in the construction, infrastructure, energy, rail, and telecom industries. “Lindapter pioneered steel-to-steel clamping systems, and today it offers products that are approved for structural connections in all seismic categories,” according to Todd Grzych of All-Pro Fasteners. “Lindapter steel connection solutions provide our customers with tremendous time savings and reduced labor costs.”

Lindapter’s product line includes girder clamps, rail connections, and lifting points, as well as Hollo-Bolt® expansion bolts. Steel floor connections allow steel flooring to be connected quickly and safely from above. Pipe/conduit supports provide easy-to-install solutions for suspending water, gas, electric, and air services from structural or secondary beams, allowing pipework and other equipment to be quickly positioned.

“We are proud of our longstanding relationship with Lindapter, which for more than 85 years has grown in reputation from a family business to a global brand,” adds All-Pro’s Grzych. All-Pro Fasteners has Lindapter specialists on staff who are always on hand to answer questions and discuss any steel-to-steel connecting application.

All-Pro has a whitepaper on the topic of Fastening vs. Welding: Fabricating Better Joints, available at [www.apf.com](http://www.apf.com).
