lindapter[®]

Technical Innovation in Steel Connections

Welcome

For over 90 years Lindapter has earned a respected reputation as the pioneer in the design and manufacture of steel clamping systems, growing from a modest family business into a reputable global brand by providing a faster, cost-effective alternative to drilling or welding.

History

Lindapter's proud heritage began in 1934 when Engineer Henry Lindsay (*above*) invented an entirely new concept of connecting steel with the Lindsay Bolt Adapter, a solution that allowed steel beams to be quickly clamped together, instead of time-consuming drilling or welding.

Henry combined the words 'Lindsay' and 'Adapter' to create the trusted brand name. Today Lindapter remains true to its roots, by continuing to invent and manufacture high quality, safe products that save steel contractors time and money.

Lindapter's unique connections can be installed with standard hand tools and allow faster construction, reduce labor costs and allow on-site adjustability with no damage to steel sections.

Here to help you

PAGES 4 - 5

Lindapter's team of experienced Engineers offer unrivalled support which includes free connection detailing and custom product development, from initial design through to installation guidance.

Girder Clamps

PAGES 6 - 35

High strength connections for steel beams, channels or angles. Type AF and AAF clamps have been evaluated by ICC-ES for structural connections in all Seismic Design Categories (A to F).

Lifting Points

PAGES 36 - 39

These assemblies support the lifting or rigging of general equipment. Can be used for single lift situations or permanent applications such as theater, lighting and rigging units.

➤ Load values and typical Factors of Safety (FOS) shown in this catalog are for Lindapter products only and are subject to the strength of the supporting section. Tightening torques stated are for unlubricated fasteners.

Connections for a range of industries...

Building

Energy

Bridges

Infrastructure

Telecom

Hollo-Bolt™

PAGES
40 - 59

Expansion bolts for quickly connecting steel sections to Hollow Structural Section (HSS) from one side. All Hollo-Bolts have been evaluated by ICC-ES for all Seismic Design Categories (A to F).

Steel Floor Connections

PAGES
60 - 63

A range of innovative products for connecting steel flooring to the supporting steel without the need for on-site drilling or welding. Installation can be carried out quickly and safely from above.

Pipe / Conduit Supports

PAGES
64 - 69

Easy-to-install solutions for suspending building services from structural or secondary beams. The adjustability of these products allows pipework and other equipment to be quickly positioned.

Case Studies

PAGES
80 - 85

Read how Lindapter's proven connection solutions have been used in prestigious construction projects such as the Tobin Bridge in Boston and the Wilshire Grand Center in Los Angeles.

Additional technical support services available to you

We offer comprehensive design and support, tailoring our products to your application. Our team of qualified Structural and Mechanical Engineers are on hand to work with you to deliver the highest level of service from initial concept designs through to completion.

Engineered Solutions

Lindapter's Research & Development facility and unique expertise facilitates a custom product development service, passionately referred to as 'Engineered Solutions'. Supported by the latest technology including 3D modelling, 3D printing, FEA and three test machines with capacity of 5 to 24 tons, Lindapter's Engineers can develop solutions that satisfy your connection demands.

Key R&D Capabilities

- ✓ Creating initial concepts and 3D models, performing FEA stress analysis to validate designs
- ✓ 3D printed samples help verify the design before prototypes are made and tested
- ✓ In-house test facility with three machines with a capacity of 5 to 24 tons for static, tensile, compression shear and slip tests
- ✓ The team ensure products meet or exceed industry standards

Contact Lindapter to design a solution for your connection requirement. Email support@Lindapter.com or call **866-566-2658 (BOLT)** for more details.

Lunch and Learn

We are pleased to offer Lunch and Learn presentations either in person or online and run regular live webinars. These presentations look at the unique solutions, offered by Lindapter, for connecting steel faster and more cost-effectively compared to alternative traditional methods of welding or drilling and bolting.

Who should attend?

Structural Engineers, Consulting Engineers and Specifiers involved with the design of steel-to-steel connections.

How do I book?

Please complete the Lunch and Learn form on the Lindapter website. Once we receive your request we will contact you to confirm the date and time. Webinars can be booked via our website Live Webinar Schedule news page.

Girder Clamp - The Connection Concept

Lindapter products provide a faster, cost-effective alternative to drilling or welding in the field and are designed to reduce installation time and labor costs. A high strength, permanent (or temporary) connection is quickly achieved by clamping two steel sections together.

Quick and easy to install

1) Bring the location plate and the lower beam into position below the upper beam.

2) Fit the bolts with two Lindapter clamps, any packings required, a nut and a washer.

3) Using a torque wrench, simply tighten each bolt to the recommended torque.

REASONS TO USE...

Save time and money

Clamping two steel sections together avoids time-consuming welding or conventional drilling and bolting.

High strength

Lindapter clamps are manufactured from high strength materials to resist high load requirements and harsh environments.

Adjustable

Quickly align steel sections by sliding the section into the correct position before tightening the Girder Clamp to complete the installation.

Safer connections

Drilling and welding in the field is avoided, removing the need for hot work permits and encouraging safer site conditions.

Industry leading approvals

Lindapter has earned a reputation synonymous with safety and reliability, gaining multiple independent approvals. Further details can be found on **page 86**.

Free connection detailing

Lindapter's experienced Engineers can detail a custom connection based on your specific requirements free of charge. See **page 4** for more details.

Turn to **page 8** to see the components of a Girder Clamp in more detail.

Watch how to install Girder Clamps at www.Lindapter.com

Typical Configurations

The Girder Clamp represents a range of Lindapter products that are compatible with virtually any shape or size of steel section and can withstand loading conditions in a wide variety of applications, for example:

STANDARD

Beam-to-beam (tensile loading)

The original configuration is designed to secure steel sections and resist tensile loading. It features a pre-drilled location plate that is placed between the beams to locate the four bolts. Each bolt has two Lindapter components to clamp the flange immediately above and below the plate. For larger beams with increased flange thicknesses, packing pieces may be required to raise the height of the clamp to ensure the component is positioned correctly on the beam.

See the components of a Girder Clamp in more detail on [page 8](#).

HIGH SLIP RESISTANCE

Beam-to-column (slip resistance)

This configuration utilizes a High Slip Resistance (HSR) clamp to achieve a secure connection to vertical columns.

An end plate is pre-fabricated to the section that will be joined to the column. The purpose of this plate is to locate the bolts and provide a fastening position for the Lindapter clamps.

Lindapter's range of HSR clamps can be found on [pages 10 - 19](#).

ADJUSTABLE

Inclined beam-to-beam (combined loading)

A fabricated assembly, optimized with Lindapter's adjustable High Slip Resistance clamps to resist both tensile loading and slip.

This solution is adjustable, allowing for a connection to a wide range of flange thicknesses for added convenience. Lindapter can detail and supply the entire assembly to suit individual applications.

Read more about free connection detailing on [page 4](#).

Lindapter has a solution for connecting almost any type of steel section including W beams, S beams, channels, angles and more. See [pages 31 - 35](#) for examples.

Girder Clamp Configuration

A Girder Clamp is a connection system configured with components to suit specific application requirements, for example high tensile loading or high corrosion resistance. Take advantage of our free connection detailing to find the best solution for your connection requirement.

Typical Girder Clamp Components

➤ This example is for illustration purposes only. Contact Lindapter to determine the optimum configuration for your connection requirement.

Bolt Length Calculator

To calculate bolt length, simply add up all parts the bolt will go through and use the next standard bolt length. The example on the right shows the Type AAF used with 1/2" A325 bolts to connect W12 x 26 below W14 x 61:

Can we help?
Try Lindapter's free connection detailing

For your next project, Lindapter's team of experienced Engineers can advise the correct product and detail the connection for you free of charge, providing CAD drawings in 2D or 3D BIM compatible files that can be imported into all major software. Turn to **page 4** for more information.

A Bolt protrusion = 0.5 x bolt Ø	1/4"
B Height of nut	1/2"
C Hardened Washer	1/8"
D DTI Washer (if applicable)*	1/8"
E T of top clamp	1 3/8"
F Flange thickness of top section	5/8"
G Plate thickness	1/2"
H Flange thickness of lower section	3/8"
I T of lower clamp	1 3/8"
J Hardened Washer	1/8"
Total length	5 3/8"
Next standard bolt length	5 1/2"

Product Configuration

The table below shows the various components that can be assembled in a Girder Clamp arrangement. Each product has specific properties, for example the Type AF heavy duty clamp can resist tensile loads up to 56,200lbs when used with four bolts (A490) in a Girder Clamp assembly.

Single Components

Product	Parallel Flanges	Tapered Flanges	Tensile	High Slip Resistance	Slotted Clearance Holes	Adjustable	Stainless Steel	Evaluated for Fatigue	ICC-ES Approved

Lindapter Lifting Points
See pages 36 - 39 for more information.

Type AAF

This adjustable High Slip Resistance clamp is easy to install and provides high load capacities even in low temperature environments down to -76°F. Hot dip galvanized corrosion protection.

ICC ES IMPORTANT: If you are designing a connection to the IBC, refer to the ICC-ES data on pages 14 - 15.

Note: Y, X and T will vary depending on the thickness of V.

- High slip resistance clamp evaluated for tensile, slip and combined load applications.
- Independently evaluated for fatigue resistance per ICC-ES ESR-3976, AISC 360 Appendix 3 and EN 1993-1-9.
- Self-adjusts to suit a range of flange thicknesses.
- Safe working loads apply in temperatures as low as -76°F.
- For parallel and tapered flanges up to and including 10°.
- The tail spans slotted clearance holes.

- Lindapter recommends the use of DTI Washers when using A325 or A490 structural bolts with Type AAF. For further information refer to page 70.
- For fatigue resistance please refer to ESR 3976 for appropriate stress category in accordance with AISC 360 Appendix 3 or contact our Technical Support team.

Material: Low temperature SG iron, hot dip galvanized.

* Torque figures based on fasteners in an unlubricated condition. For further information see page 70. ** Limited availability of Grade A490 bolts - please check availability before specifying.

▶ Watch the installation video at www.Lindapter.com

Type CF

Hooks over the flanges of beams, angles and channels to connect steel sections that do not face, such as connecting horizontal beams with vertical columns.

'V' refers to the thickness of the section at the edge of the profile where the component is in contact with the flange. This dimension should be checked when connecting to tapered flanges or sections with a radius on the flange edge.
 Note: The (t) value for C-Channels shown in AISC tables refer to the Average Thickness and not the edge thickness.

- Suitable for parallel and tapered flanges up to and including 10°.
- Can be combined with other Lindapter High Slip Resistance clamps (Grd. 5 or A325 bolts only); see table below for safe working loads.
- Can also be used with Grd. B7 or A449 rods.

➔ Location plate / end plate details can be found on page 19.

Material: SG iron, hot dip galvanized.

Additional Applications for Type CF

Type CF is a versatile solution that has been tested in a wide range of applications, including suspending equipment from supporting sections. It can be easily adjusted for quick alignment of pipework, electrical cables and other building services equipment. Two popular connection arrangements are shown below.

EXAMPLE 1

Bolt Size	Product Code(s)	Recommended Safe Working Load / bolt 5:1 Factor of Safety
1/2"	LCF050 / LCF2050	1125 lbs
5/8"	LCF062 / LCF2062	2250 lbs
3/4"	LCF075 / LCF2075	4500 lbs

EXAMPLE 2

Bolt Size	Product Code(s)	Recommended Safe Working Load / bolt 5:1 Factor of Safety
1/2"	LCF050 / LCF2050	225 lbs
5/8"	LCF062 / LCF2062	1350 lbs
3/4"	LCF075 / LCF2075	2700 lbs

Type AAF (data for applications requiring ICC approval)

Lindapter's Girder Clamp is the world's first and only approved structural steel clamping system that is compliant with the International Building Code for structural and seismic designs. Pages 14 to 17 include extracts from ESR-3976, visit www.Lindapter.com to view the full report.

ICC-ES Girder Clamp Components

The following components must be used for Type AAF ICC-ES approved connections:

- 1 Hexagon Nut to A563 Grade DH
- 2 Standard Hardened Washer to ASTM F436
- 3 DTI Washer to ASTM F959 (see page 70 for details)
- 4 Type AAF
- 5 Location Plate or End Plate (see page 19)
- 6 Standard ASTM F3125 A325 / A490 Hexagon Bolt
If using a Tension Control Bolt (ASTM F1852/F2280), DTI washer is not required.

Type AAF (data for applications requiring ICC approval)

The data below is for use by Engineers designing a connection as per AISC 360, AISC 341 and ASCE / SEI 7 as referenced by the locally adopted building code. To comply with ICC-ES please also refer to Evaluation Report ESR-3976 and the Special Inspection Document which can be found on our website.

The Girder Clamp is approved for use in all Seismic Design Categories (SDC) A through F and can be configured with either a Location Plate or an End Plate (as shown in this example).

Design strengths are based on a four-bolt assembly and the correct data should be used for the required application. In this example, the LRFD design strength for an application in SDC A is shown.

Notes: • A girder clamp connection includes multiples of two, typically four, replicate girder clamp assemblies.
 • If using painted steel the coating must be removed at the point of contact to comply with ICC-ES ESR-3976.
 • Limited availability of Grade A490 bolts - please check availability before specifying.

- Refer to ESR-3976 and Lindapter's Special Inspection Document for details of connection design, installation and conditions of use.
- For fatigue resistance please refer to ESR 3976 for appropriate stress category in accordance with AISC 360 Appendix 3 or contact our Technical Support team.

Type AF (data for applications requiring ICC approval)

Lindapter's Girder Clamp is approved for use in all Seismic Design Categories (A through F) and is the only structural steel clamping system compliant with the International Building Code. Extracts of ICC Evaluation Service Report ESR-3976 can be found below, visit www.Lindapter.com to view the full report.

Dimension Data

Code Compliance	✓ADIBC
✓IBC	✓CBC

¹⁾ Packing pieces are available to increase the clamping range, see page 18. Location plate and end plate details can be found on page 19.

ICC-ES Girder Clamp Components

The following components must be used for Type AF ICC-ES approved connections:

- 1 Hexagon Nut to A563 Grade DH
- 2 Standard Hardened Washer to ASTM F436
- 3 DTI Washer to ASTM F959 (see page 70 for details)
- 4 Type AFW Washer (see page 18)
- 5 Type AF
- 6 Location Plate or End Plate (see page 19)
- 7 Standard ASTM F3125 A325 / A490 Hexagon Bolt
If using a Tension Control Bolt (ASTM F1852/F2280), DTI washer is not required.

➤ Packing Pieces (if required) can be used to increase the clamping range (see page 18).

Type AF (data for applications requiring ICC approval)

The data below is for use by Engineers designing a connection as per AISC 360, AISC 341 and ASCE / SEI 7 as referenced by the locally adopted building code. To comply with ICC-ES please also refer to Evaluation Report ESR-3976 and the Special Inspection Document which can be found on our website.

The Girder Clamp is approved for use in all Seismic Design Categories (SDC) A through F and can be configured with either a Location Plate (as shown in this example) or an End Plate.

Design strengths are based on a four-bolt assembly and the correct data should be used for the required application. In this example, the LRFD design strength for an application in SDC F is shown.

Connection Example

Bolt Size	1"
Bolt Grade	A490
Design Method	LRFD
Seismic Design Category	F
Tensile Design Strength of Assembly	116,000 lbs
Slip Design Strength of Assembly	18,100 lbs

LRFD design strength & ASD allowable strength

LRFD and ASD strengths (taken from ESR-3976) are to be used when designing a connection per AISC 360, AISC 341 and ASCE/SEI 7 as referenced by the locally adopted building code.

Product Code	Bolt		Static				Seismic Design Category A, B and C				Seismic Design Category D, E and F

Notes: • A girder clamp connection includes multiples of two, typically four, replicate girder clamp assemblies.
 • If using painted steel the coating must be removed at the point of contact to comply with ICC-ES ESR-3976.
 • Limited availability of Grade A490 bolts - please check availability before specifying.

- Refer to ESR-3976 and Lindapter's Special Inspection Document for details of connection design, installation and conditions of use.
- For fatigue resistance please refer to ESR 3976 for appropriate stress category in accordance with AISC 360 Appendix 3 or contact our Technical Support team.

Packing Pieces for Types AF and AAF

Packing pieces are used to increase the clamping range to suit a range of flange thicknesses. The Type AF is available with two different tail lengths (short and medium) and the correct combination of packing pieces should be used, see the table at the bottom of the page.

Packing Pieces

Type AFCW

Mild steel, hot dip galvanized.

Product Code	Bolt Size Z	Dimension T
LAF050CW	1/2"	1/16"
LAF062CW	5/8"	1/16"
LAF075CW*	3/4"	1/16"

* Not compatible with Type AAF clamp.

Note: Type AFCW has a slight bend along its center line which flattens out during installation.

Type AFP1 / AFP2 / AAFP3

Mild steel, hot dip galvanized.

Product Code	Bolt Size Z	Dimension T
LAF050P1	1/2"	3/16"
LAF062P1	5/8"	3/16"
LAF075P1*	3/4"	3/16"
LAF100P1*	1"	3/16"
LAF050P2	1/2"	3/8"
LAF062P2	5/8"	3/8"
LAF075P2*	3/4"	3/8"
LAF100P2*	1"	3/8"
LAAF075P3	3/4"	13/16"

* Not compatible with Type AAF clamp.

Also Available

Type AFW

SG iron, mild steel, hot dip galvanized.

Product Code	Bolt Size Z	Dimension T
LAF050W	1/2"	3/16"
LAF062W	5/8"	3/16"
LAF075W	3/4"	1/4"
LAF100W	1"	3/8"

Note: Type AFW converts the recess to a flat top to enable the bolt head or nut to be rotated on a hardened washer and is required for A325, A490 and 1" Grade 5 structural bolts.

Tail Length / Packing Piece Combinations for Type AF

Choose the correct combination for your configuration using the table on the right. **Note these calculations are for parallel flanges and beams up to 10° slopes only.** For example, a 3/4" Type AF on a 1 9/16" flange requires 1 x Type AF medium tail (M), 1 x Type AFCW and 2 x Type AFP2.

- For thicker flanges contact Lindapter.
- If your flange thickness exceeds the flange thickness listed in the table, use the packing piece combination from the next largest flange thickness. Interpolation of table values is not permitted.
- Other combinations than what is shown here may be possible. Please contact our Technical Support team to discuss your requirements.

Flange Thickness	1/2"				5/8"				3/4"				1"

Location and End Plates for Types AF, AAF and CF

These plates ensure the clamps and bolts are located in the correct position relative to the supporting steel. If you would like help choosing a suitable plate, please contact Lindapter.

Location Plate

Location plates are required when securing two sections together with clamps attached to the upper and lower sections with both clamps directly opposing each other.

The plate is positioned between the two sections to hold the bolts at the correct centers and should be fabricated to the dimensions shown in the table below.

Material: Structural steel A572 Grade 50. For other grades contact Lindapter.

Bolt Size	Hole \emptyset d	Minimum Plate Thickness for Bolt Grade		Hole Centers C1	Length min L1	Hole Centers C2	Width min L2
		5/A325	A490				
1/2"	9/16"	1/2"	1/2"	$B_1 + 9/16"$	$B_1 + 4"$	$B_2 + 9/16"$	$B_2 + 4"$
5/8"	11/16"	5/8"	5/8"	$B_1 + 11/16"$	$B_1 + 4"$	$B_2 + 11/16"$	$B_2 + 4"$
3/4"	13/16"	3/4"	3/4"	$B_1 + 13/16"$	$B_1 + 6"$ *	$B_2 + 13/16"$	$B_2 + 6"$ *
1"	1 1/8"	1"	1"	$B_1 + 1 1/8"$	$B_1 + 7"$	$B_2 + 1 1/8"$	$B_2 + 7"$

* Plate length / width for Type AF size 3/4" can be reduced to 5" if required.

LOCATION PLATE DIMENSIONS

L1 = Location Plate Length, L2 = Location Plate Width, B1, B2 = Flange Width, C1, C2 = Hole Centers, d = Hole \emptyset

End Plate

End Plates should be used when clamps are attached to the supporting section only.

The End Plate holds the bolts at the correct centers and should be fabricated to the dimensions shown in the table below.

Material: Structural steel A572 Grade 50. For other grades contact Lindapter.

Bolt Size	Hole \emptyset d	Minimum Plate Thickness for Bolt Grade ¹⁾		Hole Centers C1	Length min L1	Hole Centers min C2	Width min L2
		5/A325	A490				
1/2"	9/16"	5/8"	5/8"	$B + 9/16"$	$B + 4"$	$3 1/8"$	$C_2 + 3 1/8"$
5/8"	11/16"	3/4"	1"	$B + 11/16"$	$B + 4"$	4"	$C_2 + 4"$
3/4"	13/16"	1"	1"	$B + 13/16"$	$B + 6"$ *	7"	$C_2 + 7"$
1"	1 1/8"	1 1/4"	1 1/4"	$B + 1 1/8"$	$B + 7"$	$7 7/8"$	$C_2 + 7 7/8"$

¹⁾ Depending on the type of connection and associated end plate use, the thickness may need to be modified to comply with accepted local design codes.

* Plate length for Type AF size 3/4" can be reduced to 5" if required.

END PLATE DIMENSIONS

L1 = End Plate Length, L2 = End Plate Width, B = Flange Width, C1, C2 = Hole Centers, d = Hole \emptyset

- For ICC-ES approved connections the Location Plate or End Plate must be bare steel or HDG. Refer to ESR-3976 and Lindapter's Special Inspection Document for details of connection design, installation and conditions of use.
- Use Lindapter's Bolt Length Calculator on page 8 to calculate the correct bolt length for your application.
- If drilling through the flange of the supported steel please contact Lindapter to ensure suitability.

Type LR

A versatile, self-adjusting clamp designed to suit a range of flange thicknesses.

Note 1: When installing, ensure the straight (not tapered) leg of the saddle is in contact with the flange.
 Note 2: Y, X and T will vary depending on the thickness of V.

▶ Watch the installation video at www.Lindapter.com

- Clamping ranges from 1/8" - 1" (size 1").
- For parallel and tapered flanges up to and including 15°.
- The leg of the saddle prevents the clamp from rotating.
- The tail spans slotted clearance holes.

- ▶ Packing pieces are available to increase the clamping range, see page 21.
- ▶ Location plate / end plate details can also be found on page 21.

Material: Malleable iron, zinc plated or hot dip galvanized.

1) Depending on the type of connection and associated end plate use, the thickness may need to be modified to comply with accepted local design codes.

- Use Lindapter's Bolt Length Calculator on page 8 to calculate the correct bolt length for your application.
- If drilling through the flange of the supported steel please contact Lindapter to ensure suitability.

Type A

Lindapter's standard clamp is used to resist moderate tensile loading. Can also be used with Type B in a Girder Clamp configuration.

▶ Watch the installation video at www.Lindapter.com

- Recessed top holds the bolt captive while the nut is tightened (Grd. 5 bolt sizes 1/2", 5/8" or 3/4" only).
- Supports up to 17,720lbs tensile load in a four-bolt configuration.
- Independently evaluated for fatigue resistance per EN 1993-1-9.
- For products suitable for tapered beams over 4°, see page 9.
- For higher loads the Type AF should be used, see page 11.

▶ Packing pieces are available to increase the clamping range, see page 24. ▶ For location plate / end plate details, see page 25.

Material: Malleable iron, zinc plated or hot dip galvanized.

FAOS & CASE STUDIES

- Flat top allows the bolt head or nut to rotate on a hardened washer.
- Suitable for use with bolts, studs, tie rods and J-bolts.
- Supports up to 17,720lbs tensile load in a four-bolt configuration.
- Independently evaluated for fatigue resistance per EN 1993-1-9.
- For products suitable for tapered beams over 4°, see page 9.
- For higher loads the Type AF should be used, see page 11.

▶ Packing pieces are available to increase the clamping range, see page 24. ▶ For location plate / end plate details, see page 25.

Material: Malleable iron, zinc plated or hot dip galvanized.

Product Code	Bolt Grd. 5 / A325 Z	Safe Working Loads (FOS 5:1)		Minimum Plate Thickness (see page 25)		Tightening Torque* ft lb	Y	X	Dimensions			T	Width

¹⁾ Requires a hardened washer under the bolt head.

* Torque figures based on fasteners in an unlubricated condition. For further information see page 70.

Packing Pieces for Types A and B

These packing pieces are compatible with the Type A and Type B clamps and are used to increase the clamping range to suit flange thicknesses. Types A and B are available with three different tail lengths (short, medium or long) and the correct combination of packing pieces should be used.

Packing Pieces

Type CW

Type P1 short / Type P2 short

Also Available

Type W

Mild steel, zinc plated or hot dip galvanized.

Product Code	Bolt Size Z	Dimension T
LCW037	3/8"	1/16"
LCW050	1/2"	1/8"
LCW062	5/8"	1/8"
LCW075	3/4"	3/16"
LCW100	1"	3/16"

Mild steel, malleable iron, zinc plated or hot dip galv.

Product Code	Bolt Size Z	Dimension T
LP1037S	3/8"	3/16"
LP1050S	1/2"	1/4"
LP1062S	5/8"	5/16"
LP1075S	3/4"	3/8"
LP1100S	1"	1/2"
LP2037S	3/8"	3/8"
LP2050S	1/2"	1/2"
LP2062S	5/8"	5/8"
LP2075S	3/4"	3/4"
LP2100S	1"	1"

Mild steel, malleable iron, zinc plated or hot dip galv.

Product Code	Bolt Size Z	Dimension T
LW037	3/8"	3/16"
LW050	1/2"	1/4"
LW062	5/8"	5/16"
LW075	3/4"	3/8"

Note: Type W is used to fill the recess in the Type A to convert it into a flat top clamp which enables an A325 structural bolt head or nut to be rotated on a hardened washer.

Tail Length / Packing Piece Combinations for Types A and B

Choose the correct combination for your Type A/B configuration using the table below. For example, a 5/8" Type A/B on a 1 1/8" flange requires 1 x Type A/B short tail (S), 2 x Type CW and 1 x Type P2S.

- For thicker flanges contact Lindapter.
- Other combinations than what is shown here may be possible. Contact our Technical Support team to discuss your requirements.
- If your flange thickness exceeds the flange thickness listed in the table, use the packing piece combination from the next largest flange thickness. Interpolation of table values is not permitted.

Flange Thickness	3/8"				1/2"				5/8"				3/4"				1"

Location and End Plates for Types A and B

These plates ensure the clamps and bolts are located in the correct position relative to the supporting steel. If you would like help choosing a suitable plate, please contact Lindapter.

Location Plate

Location plates are required when securing two sections together with clamps attached to the upper and lower sections with both clamps directly opposing each other.

The plate is positioned between the two sections to hold the bolts at the correct centers and should be fabricated to the dimensions shown in the table below.

Material: Structural steel grade A36. For other grades contact Lindapter.

Bolt Size	Hole \emptyset d	Plate Thickness	Hole Centers C1	Length min L1	Hole Centers C2	Width min L2
3/8"	7/16"	5/16"	$B_1 + 7/16"$	$B_1 + 1\ 3/4"$	$B_2 + 7/16"$	$B_2 + 1\ 3/4"$
1/2"	9/16"	3/8"	$B_1 + 9/16"$	$B_1 + 2\ 1/4"$	$B_2 + 9/16"$	$B_2 + 2\ 1/4"$
5/8"	11/16"	3/8"	$B_1 + 11/16"$	$B_1 + 2\ 3/4"$	$B_2 + 11/16"$	$B_2 + 2\ 3/4"$
3/4"	13/16"	1/2"	$B_1 + 13/16"$	$B_1 + 3\ 1/2"$	$B_2 + 13/16"$	$B_2 + 3\ 1/2"$
1"	1 1/16"	5/8"	$B_1 + 1\ 1/8"$	$B_1 + 4\ 1/4"$	$B_2 + 1\ 1/8"$	$B_2 + 4\ 1/4"$

LOCATION PLATE DIMENSIONS

L1 = Location Plate Length, L2 = Location Plate Width, B1, B2 = Flange Width, C1, C2 = Hole Centers, d = Hole \emptyset

End Plate

End Plates should be used when clamps are attached to the supporting section only.

The End Plate holds the bolts at the correct centers and should be fabricated to the dimensions shown in the table below.

Material: Structural steel grade A36. For other grades contact Lindapter.

Bolt Size	Hole \emptyset d	Plate Thickness ¹⁾	Hole Centers C1	Length min L1	Hole Centers min C2	Width min L2
3/8"	7/16"	1/2"	$B + 7/16"$	$B + 1\ 3/4"$	2"	$C_2 + 1\ 5/8"$
1/2"	9/16"	1/2"	$B + 9/16"$	$B + 2\ 1/4"$	$2\ 3/8"$	$C_2 + 2"$
5/8"	11/16"	5/8"	$B + 11/16"$	$B + 2\ 3/4"$	$2\ 7/8"$	$C_2 + 2\ 3/8"$
3/4"	13/16"	7/8"	$B + 13/16"$	$B + 3\ 1/2"$	$3\ 5/8"$	$C_2 + 2\ 3/4"$
1"	1 1/16"	1"	$B + 1\ 1/8"$	$B + 4\ 1/4"$	$4\ 3/8"$	$C_2 + 3\ 5/8"$

1) Depending on the type of connection and associated end plate use, the thickness may need to be modified to comply with accepted local design codes.

END PLATE DIMENSIONS

L1 = End Plate Length, L2 = End Plate Width, B = Flange Width, C1, C2 = Hole Centers, d = Hole \emptyset

- Use Lindapter's Bolt Length Calculator on page 8 to calculate the correct bolt length for your application.
- If drilling through the flange of the supported steel please contact Lindapter to ensure suitability.

Type LS

Providing excellent corrosion resistance, Lindapter's stainless steel clamp self-adjusts to suit a range of flange thicknesses.

Nose

STAINLESS STEEL
Grade 316

Tail

▶ Watch the installation video at www.Lindapter.com

- Made from high strength stainless steel grade 316.
- Self-adjusts to suit a range of flange thicknesses.
- For parallel and tapered flanges up to and including 10°.
- The tail spans slotted clearance holes.

▶ See page 27 for the packing pieces available to increase the clamping range, as well as location and end plate details.

Material: Cast stainless steel grade 316.

FAQS & CASE STUDIES

Packing Pieces and Plate Details for Type LS

Stainless steel packing pieces are available to increase the clamping range of the Type LS, please select the correct packing combination from the table below. This page also contains information for designing location / end plates.

Packing Pieces

Type LSP2

Material: Stainless steel grade 316.

Product Code	Bolt Size Z	Dimension T
LLS037P2	3/8"	3/8"
LLS050P2	1/2"	3/8"
LLS062P2	5/8"	3/8"
LLS075P2	3/4"	3/8"

Location Plate

Location Plates are required when securing two sections together with clamps attached to the upper and lower sections with both clamps directly opposing each other. The plate is positioned between the two sections to hold the bolts at the correct centers and should be fabricated to the dimensions shown in the table below.

Material: Stainless steel grade 316.

Bolt Size	Hole \emptyset d	Plate Thickness	Hole Centers C1	Length min L1	Hole Centers C2	Width min L2
3/8"	7/16"	3/8"	$B_1 + 7/16"$	$B_1 + 2 3/4"$	$B_2 + 7/16"$	$B_2 + 2 3/4"$
1/2"	9/16"	1/2"	$B_1 + 9/16"$	$B_1 + 3 1/8"$	$B_2 + 9/16"$	$B_2 + 3 1/8"$
5/8"	11/16"	5/8"	$B_1 + 11/16"$	$B_1 + 4"$	$B_2 + 11/16"$	$B_2 + 4"$
3/4"	13/16"	3/4"	$B_1 + 13/16"$	$B_1 + 5 1/8"$	$B_2 + 13/16"$	$B_2 + 5 1/8"$

LOCATION PLATE DIMENSIONS

L1 = Location Plate Length, L2 = Location Plate Width, B1, B2 = Flange Width, C1, C2 = Hole Centers, d = Hole \emptyset

End Plate

End Plates should be used when clamps are attached to the supporting section only. The End Plate holds the bolts at the correct centers and should be fabricated to the dimensions shown in the table below.

Material: Stainless steel grade 316.

Bolt Size	Hole \emptyset d	Plate Thickness ¹⁾	Hole Centers C1	Length min L1	Hole Centers min C2	Width min L2
3/8"	7/16"	3/8"	$B + 7/16"$	$B + 2 3/4"$	3 1/8"	$C_2 + 2 3/8"$

PIPE SUPPORTS

FAOS & CASE STUDIES

Type F9

A flange clamp for connecting parallel running steel sections with flanges of the same width. Can be used with bolts or threaded rod.

▶ Watch the installation video at www.Lindapter.com

- Fast, cost effective installation.
- Perfect for temporary or permanent use.
- Large clamping range.
- Available zinc plated or hot dip galvanized.
- Can be used with threaded rod for supporting pipes.
- Supplied with or without a metric bolt.

Material: Malleable iron, zinc plated or hot dip galvanized.

Typical Applications for Girder Clamps

Examples of popular connection arrangements are continued below. Please contact Lindapter to discuss your connection requirement.

The versatile Type ALP not only provides lateral adjustability, it also adjusts to suit different beam sizes and the orientation of the lift (see page 38).

Lifting Points

Lindapter's lifting points are used in a variety of industries to support the lifting and rigging of heavy equipment. Applications vary from suspending overhead audio-visual kit in theaters to lifting drilling risers onto offshore oil platforms.

(Standard)**
page 38

**Type LP
(Custom)**
page 39

Lifting Point Configuration

Lindapter manufactures Lifting Points that are configured with adjustable, high strength components to suit heavy loads up to 45,000lbs SWL. Take advantage of Lindapter's free connection detailing for advice on the best solution for your connection.

Quick and easy to install

Step 1

Offer the pre-assembled location plate up to the beam ensuring it is positioned centrally to it.

Step 2

Assemble the clamps and tighten to the recommended torque.

Watch the installation video at www.Lindapter.com

6 reasons to use

- ✓ Quick and easy to install using standard hand tools.
- ✓ Easy to align and reposition.
- ✓ Maximum safe working load up to 45,000lbs (Type LP).
- ✓ For parallel and tapered flanges up to 10°.
- ✓ Utilizes ICC-ES approved Lindapter clamps.
- ✓ Free Connection Detailing available.

Email your connection details to support@Lindapter.com and Lindapter's experienced Engineers will do the rest!

STANDARD

Type ALP

Ideal for most applications up to 6,600lbs, this assembly self-adjusts to suit a range of flange thicknesses. For further convenience, the slotted holes in the location plate allow the clamp to adapt to different beam widths, often allowing contractors to use just one type of lifting point throughout a project. Lindapter's standard lifting point is immediately available off-the-shelf.

See the Type ALP and its components in more detail on [page 38](#).

CUSTOM

Type LP

For large steel sections or loads up to 45,000lbs, Lindapter manufactures custom-made solutions for specific application requirements. Whatever the application, Lindapter's durable products are valued for their quality and reliability, and provide contractors with a safe, quick and convenient lifting system.

See the Type LP and its components in more detail on [page 39](#).

Type ALP

Lindapter's standard rigging and lifting solution adjusts to suit the beam width, flange thickness and orientation of the lift. Safely supports loads up to 6,600lbs.

- Available 'off-the-shelf' with a safe working load up to 6,600lbs.
- Adjusts to fit different sized beams and can be easily repositioned.
- Suitable for parallel and tapered beams up to and including 10°.
- Large load ring can be repositioned at 90° to suit the orientation of the lift.

- Suitable for supporting the lifting and rigging of equipment only.
- The ALP assembly must be regularly inspected for signs of wear or damage, in accordance with the standards / regulations of the country of use.
- Static Safe Working Load values are subject to the capacity of the supporting sections. Please refer to the ALP user guide for guidance.

Material: Type AAF clamps (low temperature SG iron, hot dip galvanized), Location Plate (mild steel or hot dip galvanized) and Load Ring (forged steel, painted).

Product Code	Torque Figures*				Clamping Range		Safe Working Loads (FOS 4:1) lbs	Max Angle of Load X
	Load Ring Countersunk Bolts		Type AAF Set Screws		Flange Thickness ²⁾ V	Beam Width U		
	10.9 Bolt ¹⁾	Torque ft lb	8.8 Bolt ¹⁾	Torque ft lb				
LALP 3T-1	M16 (5/8")	74	M12 (1/2")	66	3/16" - 1"	2 3/4" - 8 1/4"	6600	18°
LALP 3T-2	M16 (5/8")	74	M12 (1/2")	66	3/16" - 1"	7 1/2" - 13"	6600	18°
LALP 3T-3	M16 (5/8")	74	M12 (1/2")	66	3/16" - 1"	12 3/16" - 17 3/4"	6600	18°

1) Metric bolts, nearest imperial / UNC equivalent shown in brackets.

2) Packing pieces can be used to increase the clamping range. Please contact Lindapter Technical Support for more details.

* Torque figures based on fasteners in an unlubricated condition. For further information see page 70.

Type LP

Utilizing Lindapter's high strength Type AF or AAF clamps for heavy loads, the Type LP is available in custom configurations up to 45,000lbs SWL.

LP4 (up to 10,000lbs SWL)

Lifting Point with 4 Type AF or AAF clamps

Eye Bolt

LP6 (up to 22,500lbs SWL)

Lifting Point with 6 Type AF or AAF clamps

Load Ring

**CUSTOM
SOLUTION**

The Type LP can be supplied with either an Eye Bolt or Load Ring. Please state your requirement when ordering.

- ▶ Lifting Points must be regularly inspected for signs of wear or damage, in accordance with the standards / regulations of the country of use.
- ▶ Static Safe Working Loads are subject to the capacity of the supporting section.

Custom configurations up to 45,000lbs are also available

Lindapter manufactures customized Lifting Points to meet individual requirements, two examples are shown on the right. These custom connections are designed to specific application requirements, such as vertical loads, loads at an angle and orientation of up to 360°. The product designation, i.e. LP(#), determines the number of Type AF or AAF clamps.

For example, the LP6 has six M24 Type AF or AAF clamps to create a Safe Working Load of up to 22,500lbs (4:1 Factor of Safety). Provide details of the loading, orientation, angle and beam dimensions and Lindapter's team of Engineers will detail a connection solution to suit your needs.

Code Compliance						
✓IBC	✓IRC	✓CBC	✓CRC	✓LABC	✓LARC	✓ADIBC

Hollo-Bolt is ICC-ES for all Seismic Design Categories A through F, in compliance with the International Building Code.

- Fast, cost saving installation from one side.
- For square, rectangular and circular hollow sections.
- High resistance to tensile and shear loads.
- High Clamping Force design (sizes 5/8" and 3/4").

- Carbon steel Hexagonal Head Hollo-Bolts have been independently evaluated for **fatigue resistance** per AISC 360 Appendix 3.
- Carbon Steel Hexagonal Head Hollo-Bolts have been independently **fire tested** per ASTM E-119.
- Low temperature tested to -50°F (carbon steel variants).
- **NEW** Hollo-Bolt plug-in tool available in Tekla Warehouse.

Hollo-Bolt Options

Hollo-Bolts are available in a range of head types for a variety of architectural finishes.

KEY	✓ Standard Option	✓ Available on request
-----	-------------------	------------------------

		Head Variants		
Sizes Available		HEXAGONAL Normal visible protrusion	COUNTERSUNK Minimal visible protrusion	FLUSH FIT Zero visible protrusion
Core Bolt Ø	5/16"	✓ Fire Tested	✓	✓
	3/8"	✓ Fire Tested	✓	✓
	1/2"	✓ Fire Tested	✓	✓
	5/8" HCF (High Clamping Force)	✓ Fire Tested	✓	-
	3/4" HCF (High Clamping Force)	✓ Fire Tested	-	-
Carbon Steel with finish	Corrosion Protection			
	Zinc Plated + JS500	✓ Fire Tested	✓	✓
	Hot Dip Galvanized	✓ Fire Tested	-	-
	Sheraplex	✓ Fire Tested	✓	✓
	Stainless Steel (316 equivalent)	✓	✓	✓

➤ Carbon steel Hexagonal Head Hollo-Bolts have been independently fire tested under tensile and shear loading with simultaneous exposure to standard fire conditions in accordance with ASTM E-119 for 120 minutes. For load data contact Lindapter.

Sizes 5/8" and 3/4", known as the Hollo-Bolt HCF, feature a High Clamping Force mechanism to produce three times more clamping force than the same sized product without the mechanism. See page 43 for more information.

Hollo-Bolt Options

Two versions are available; the original design for general hollow section connections (see below) and the larger sized High Clamping Force (HCF) for higher strength structural connections (see page 43).

Hollo-Bolt (sizes 5/16", 3/8" and 1/2")

Try our NEW online Hollo-Bolt Selector
Find and specify a suitable Hollo-Bolt for your application

The Connection Concept

A typical connection is made by inserting the Hollo-Bolt into the pre-drilled holes of the fixture and hollow section. As the bolt head is tightened, the cone is pulled up the bolt thread, causing the sleeve to expand until the cone locks the sleeve against the hollow section's inner wall.

At full tightening torque, a clamping force is established between the fixture and the steel section to form a secure connection. Once installed, only the head and the collar are visible.

Watch the video at www.Lindapter.com to see how the Hollo-Bolt expands during installation.

Case Study: Tobin Memorial Bridge (Boston, MA)

50,000 Hollo-Bolts provided a quick, secure, and easy to install solution for the refurbishment of the bridge, which is over 11,000ft long.

A solution was required for repairs and improvements to safety walkways used by maintenance personnel.

Checker plate covers were formed off-field into "S" shapes and then installed onto the safety curbs using 5/16" and 1/2" stainless steel Hollo-Bolts.

FAQS & CASE STUDIES

Hollo-Bolt HCF

The larger 5/8" and 3/4" Hollo-Bolts are optimized for high strength structural connections and feature a High Clamping Force mechanism for superior performance.

Hollo-Bolt HCF (sizes 5/8" and 3/4")

	TENSION	SHEAR
M50	4 kN	5 kN
M60	6.5 kN	10 kN
M80	10.5 kN	15 kN
M90	21 kN	30 kN
M120	35 kN	40 kN

Hexagon

Try our NEW online Hollo-Bolt Selector
Find and specify a suitable Hollo-Bolt for your application

The Connection Concept

The HCF mechanism consists of a special rubber washer that compresses during installation to significantly increase the clamping force between the connecting steel, thereby reducing displacement to achieve a higher strength connection.

The typical clamping force of Hollo-Bolt HCF is over **three times higher** than the same sized product without the mechanism.

Watch the video at www.Lindapter.com to see how the High Clamping Force mechanism increases clamping force.

Case Study: Wilshire Grand Center (Los Angeles, CA)

3,000 Hollo-Bolts were used to connect primary steel tubes (HSS), which form the curved canopy structure of this skyscraper in Los Angeles.

They were installed from just one side, rapidly achieving discreet splice connections without drilling or welding in the field.

The cost-effective installation did not require specialist equipment or labor and reduced the amount of work at height in comparison to welding or through-bolting.

Read more on page 84

Typical Applications for Hollo-Bolt

FAQS & CASE STUDIES

“ We recommend using Hollo-Bolts due to the ICC-ES approved capacities for use in all Seismic Design Categories. ”

John S. McDonald, Principal at Catena Consulting Engineers
Project: Wilshire Grand Center, CA (see the case study on page 84)

ICC-ES Approved Hollo-Bolt™

The following pages are for use by Engineers designing a connection as per AISC 360, AISC 341 and ASCE/SEI 7 as referenced by the locally adopted building code. To comply with ICC-ES please also refer to our Evaluation Report ESR 3330 and the Special Inspection Document which can be found on our website.

- Hollo-Bolts can be used on a variety of steel hollow sections and shapes. Limit States of the section, could occur at a lower figure and therefore its strength should be checked by a qualified Structural Engineer. Contact Lindapter for equivalent bearing area and diameter under cone.
- Refer to ESR-3330 and Lindapter's Special Inspection Document for details of connection design, installation and conditions of use.

HOW TO SPECIFY THE FINISH TO THE PRODUCT CODE

Example Product Code: **LHBM08HEX#1**

Choose your finish and add the finish code:

- Zinc Plated + JS500: **ZN**
- Hot Dip Galvanized: **HDG**
- Sheraplex: **SP**
- Stainless Steel: **ST**

Final Product Code: **LHBM08HEX#1HDG**

Hollo-Bolt Hexagonal and Countersunk - Drilling and Installation

To comply with ICC-ES ESR-3330 Section 4.2 ensure that the holes are drilled into both the fixture and the section according to the drilling guidelines below. Please note that the holes are slightly larger than standard bolt drill diameters to accommodate the sleeve and cone.

Preparation for installing Hollo-Bolt Hexagonal and Countersunk

Product Code		Outer Ply min t	Drill Diameter Ø d1	Hole Distances*		Edge Distances* B + C
Hexagonal	Countersunk			min A	min B	
LHBM08HEX	LHBM08CSK	-	9/16"	13/8"	1/2"	≥ 11/16"
LHBM10HEX	LHBM10CSK	-	3/4"	19/16"	9/16"	≥ 7/8"
LHBM12HEX	LHBM12CSK	-	13/16"	2"	11/16"	≥ 1"
LHBM16HEX	LHBM16CSK	5/16"	11/16"	2 3/16"	13/16"	≥ 1 5/16"
LHBM20HEX	-	5/16"	1 5/16"	2 3/4"	1"	≥ 1 5/16"

* Ensure holes do not cut through outer radius.

➤ Sizes 5/8" and 3/4" require outer ply thickness (min t) to be at least 5/16".

Tool sizes for installing Hollo-Bolt Hexagonal

Hollo-Bolt Hexagonal			
Product Code	Wrench mm	Socket mm	Tightening Torque ft lb
LHBM08HEX	19 (3/4")	13 (1/2")	17
LHBM10HEX	24 (15/16")	17 (11/16")	33
LHBM12HEX	30 (13/16")	19 (3/4")	59
LHBM16HEX	36 (17/16")	24 (15/16")	140
LHBM20HEX	46 (1 13/16")	30 (1 3/16")	221

* Note: Metric, nearest equivalent shown in brackets.

Tool sizes for installing Hollo-Bolt Countersunk

Hollo-Bolt Countersunk			
Product Code	Wrench mm	Allen Wrench mm	Tightening Torque ft lb
LHBM08CSK	19 (3/4")	5	17
LHBM10CSK	24 (15/16")	6	33
LHBM12CSK	30 (13/16")	8	59
LHBM16CSK	36 (17/16")	10	140

* Note: Metric, nearest equivalent shown in brackets.

How to install...

▶ Watch the Hollo-Bolt installation video at www.Lindapter.com

- 1) Align pre-drilled fixture and section then insert the Hollo-Bolt^a.
- 2) Grip Hollo-Bolt collar with an open ended wrench.
- 3) Using a calibrated torque wrench, tighten the central bolt to the recommended torque^b.

Notes:

- a) Before tightening, ensure that the materials that are to be connected together are touching.
- b) Rotate the torque wrench only. See table above for tightening torque.
- c) Power tools, such as an impact wrench, may be used to speed up the tightening of the Hollo-Bolt. However, when using power tools, always complete the tightening process with a calibrated torque wrench to ensure the correct torque is applied to the Hollo-Bolt.

Hollo-Bolt Flush Fit - Drilling and Installation

To comply with ICC-ES ESR-3330 Section 4.2 ensure that the holes are drilled into both the fixture and the section according to the drilling guidelines below. Please note that the holes are slightly larger than standard bolt drill diameters to accommodate the sleeve and cone.

Preparation for installing Hollo-Bolt Flush Fit

Product Code	Outer Ply min t	Drill Diameter Ø d1	Countersunk		Hole Distances*		Edge Distances* B + C
			d2	t1	min A	min B	
LHBM08FF	5/16"	9/16"	1 1/16"	1/4"	1 3/8"	1/2"	≥ 1 1/16"
LHBM10FF	3/8"	3/4"	1 1/4"	1/4"	1 9/16"	9/16"	≥ 7/8"
LHBM12FF	3/8"	13/16"	1 3/8"	5/16"	2"	1 1/16"	≥ 1"

* Ensure holes do not cut through outer radius.

Tool sizes for installing Hollo-Bolt Flush Fit

Hollo-Bolt Flush Fit			
Product Code	Wrench mm	Allen Wrench mm	Tightening Torque ft lb
LHBM08FF	19 (3/4")	5	17
LHBM10FF	24 (15/16")	6	33
LHBM12FF	30 (1 3/16")	8	59

* Note: Metric, nearest equivalent shown in brackets.

How to install...

▶ Watch the Hollo-Bolt installation video at www.Lindapter.com

- 1) Align pre-drilled fixture and section then insert Hollo-Bolt[®].
- 2) Apply the installation nut and grip with an open ended wrench.
- 3) Using a calibrated torque wrench, tighten the central countersunk bolt to the recommended torque^{b)}.

Notes:

- a) Before tightening, ensure that the materials that are to be connected together are touching.
- b) Rotate the torque wrench only (the installation nut is for restraining only). See table above for tightening torque.
- c) Power tools, such as an impact wrench, may be used to speed up the tightening of the Hollo-Bolt. However, when using power tools, always complete the tightening process with a calibrated torque wrench to ensure the correct torque is applied to the Hollo-Bolt.

Type LB2 - Lindibolt™ 2

A self-heading bolt suitable for connecting steel to hollow sections where access is only available from one side. The Lindibolt uses a standard metric drill diameter.

Material: Steel, zinc plated. Stainless steel grade 316.

Code	Lindibolt		Drill Hole Diameter Ø d	Safe Working Loads (FOS 5:1)		Clamping Length W	Projection P	Setscrew (F)		Nut (C) and Locknut (D)	
	Bolt* Z	Length Y		Tensile lbs	Single Shear lbs			Torque ft lb	Nut A/F	Torque ft lb	Nut A/F
LLB037	M10 (3/8")	2 15/16"	7/16"	674	764	1/4" - 13/16"	5/16" - 3/8"	4	3/8"	15	1 1/16"

LLB062	M16 (5/8")	4 1/8"	1 1/16"	1798	2203	1/2" - 1 7/8"	1/2" - 5/8"	17	9/16"	60	1"
LLB075	M20 (3/4")	5 1/16"	1 3/16"	3147	3417	9/16" - 2 3/8"	9/16" - 13/16"	33	1 1/16"	95	1 3/16"
LLB100	M24 (1")	6 1/4"	1"	4496	5058	1 1/16" - 2 13/16"	1 1/16" - 15/16"	59	3/4"	150	1 7/16"

* Metric bolts, nearest equivalent shown in brackets.

▶ The safe working loads, in both tension and shear shown, are applicable to the Lindibolt only. Failure of the section, particularly on those with thin walls and a wide chord face, could occur at a lower figure and its strength should be checked by a qualified Structural Engineer.

Lindibolt - Drilling and Installation

Please ensure that the holes are drilled into both the fixture and the section according to the drilling guidance below.

Product Code	Drill Hole Diameter Ø d1	Hole Distances	
		min A	min B
LLB037	7/16" (+3/64")	1"	19/32"
LLB050	9/16" (+3/64")	1 3/16"	13/16"
LLB062	1 1/16" (+3/64")	1 19/32"	1"
LLB075	1 3/16" (+3/64")	1 31/32"	13/16"
LLB100	1" (+3/64")	2 3/8"	13/8"

How to install...

▶ Watch the installation at www.Lindapter.com

- 1) Set nut (C) at (W) plus projection (P) then tighten the locknut (D).
- 2) Align pre-drilled fixtures. Insert Lindibolt cone end first through both fixtures.
- 3) Hold nut (C) with a spanner and tighten the bolt (F). Loosen off the locknut (D) and tighten the nut (C). Secure by re-tightening the locknut (D).

Fillers for Hollo-Bolt applications

Fillers or shims are steel strips or plates used in bolted connections to fill gaps in the connecting steel. For guidance regarding the use of fillers/shims in Bolted-Bearing Type connections please refer to AISC 360 - Specification for Structural Steel Buildings Section J5 fillers.

The Grate-Fast™ (page 62) is used to quickly connect open bar grating from above, reducing time and labor costs.

Steel Floor Connections

A range of innovative connections for securing steel flooring to supporting steel without drilling or welding in the field. Access to the underside is not required, eliminating the need for costly scaffolding or elevated floors.

**Type FF
FloorFast™**
page 61

**Type GF
Grate-Fast™**
page 62

**Type
1055**
page 63

Type FF - FloorFast™

Securing checker plate flooring to supporting steel can be carried out quickly and safely from above, often by one person, significantly reducing costs. The stepped clamping face locks under the steel to provide a secure connection.

Unique stepped clamping face

Countersunk socket setscrew

- Superior clamping force from the cast body.
- Lloyd's Register Type Approval for resistance to shock and vibration.
- Zero protrusion above the surface of the floor plate.
- Easy to remove for maintenance access.
- Available in malleable iron or stainless steel grade 316.

Material: Malleable iron, zinc plated or hot dip galvanized. Also available in stainless steel grade 316.

Product Code	Bolt ¹⁾ Z	Floorplate Thickness t	Floorfast	Flange Thickness			Dimensions						
				Floorfast with Ferrule ²⁾			Hole Ø d	Countersunk Ø for Bolt		Countersunk Depth for Bolt		Tight. Torque ft lb	Hexagon Key mm
				10mm (3/8")	20mm (13/16")	30mm (13/16")		BZP D	HDG D	BZP t1	HDG t1		
LFF031	M8 (5/16")	3/16" - 1/2"	1/8" - 5/8"	1/2" - 1"	7/8" - 13/8"	15/16" - 13/16"	3/8"	11/16"	-	3/16"	-	8	5 (3/16")
LFF037	M10 (3/8")	3/16" - 1/2"	1/8" - 5/8"	1/2" - 1"	7/8" - 13/8"	15/16" - 13/16"	7/16"	13/16"	3/4"	3/16"	3/16"	16	6 (7/32")

1) Hot dip galvanized M10 and M12 versions are supplied with a slotted countersunk screw. 2) To order FloorFast with a ferrule, simply add ferrule size to product code (eg. LFF050 with 10mm (3/8") ferrule).

➤ Safe Working Loads (LFF031/LFF037/LFF050): Tensile = 450lbs/bolt (4:1 FoS) Slip = 112lbs/4 bolts (4:1 FoS) ➤ Designed for pedestrian walkways only.

How to install...

- 1) Assemble bolt and FloorFast through the checker plate.
- 2) Align castings with the straight edge parallel to the edge of the plate and hand tighten.
- 3) Lay the floorplate into position.
- 4) Using a hexagon key release countersunk screw one full turn.
- 5) Tighten down the countersunk socket screw.

▶ Watch the installation at www.Lindapter.com

Removal: Using a hexagon key, give the FloorFast one full anti-clockwise turn to release the connection from the flange.

Type GF - Grate-Fast™

A high strength floor connection for rectangular open bar grating, providing superior clamping force due to a malleable iron cast body. Lloyd's Register Type Approval for resistance to shock and vibration.

LGF037

LGF025-11W

- Easy to remove for maintenance access.
- **LGF025-11W** for 11-W or 11-P series of close mesh bar grating.
- **LGF031** for GRP grating with stainless steel top hat bracket, Sheraplex coated body and socket head screw.
- **LGF037 (OSB)** is hot dip galvanized for increased corrosion resistance.
- **LGF037** is hot dip galvanized for use with 13/16" width floor grating bars only.

Top Hat Material:
Stainless steel (LGF031 only). Mild Steel, hot dip galvanized (LGF025-11W, LGF037 (OSB) and LGF037 only).

Body Material:
Malleable iron, Sheraplex (LGF031 only). Malleable iron, hot dip galvanized (LGF025-11W, LGF037 (OSB) and LGF037 only).

Product Code	Bolt Z	Flange T	Grating Bar Depth D	Grating Bar Width W	Bar Distance X	Tightening Torque ft lb	Hex. Key / Socket mm
LGF025-11W	M6 (1/4")	1/4" - 3/4"	1" - 2"	1/8" - 3/16"	1 1/16"	3	5 (3/16")
LGF031¹⁾	M8 (5/16")	1/8" - 3/4"	7/8" - 1 1/2"	3/16" - 3/8"	3/4" - 1 7/8"	4	6 (7/32")
LGF037 (OSB)²⁾	M10 (3/8")	1/8" - 3/4"	13/16" - 2"	1/8" - 1/4"	1" - 1 3/4"	8	10 (3/8")
LGF037¹⁾	M10 (3/8")	1/8" - 3/4"	3/4" - 1 9/16"	1/8" - 1/4"	1 3/16"	8	8 (5/16")

1) Supplied with socket head cap screw. 2) Supplied with hex head screw.

- ▶ **Safe Working Loads (LGF031/LGF037 (OSB)/LGF037):** Tensile = 360lbs/bolt (4:1 FoS) Slip = 112lbs/4 bolts (4:1 FoS)
- ▶ **Safe Working Loads (LGF025-11W):** Slip = 24lbs/4 bolts (4:1 FoS) ▶ **Designed for pedestrian walkways only.**

How to install...

- 1) Position pre-assembled Grate-Fast with the body between the grating bars and the nose pointing towards the steel. The arrows on the top hat bracket should also be point towards the supporting steel and the bracket itself resting on the bearing bars.
- 2) Slide the Grate-Fast towards the steel until the nose fits under the beam flange. Where necessary adjust the body / screw to the approximate flange thickness / grating depth.
- 3) Tighten the screw. The Grate-Fast body will automatically rotate until it locks under the bearing bar, with the nose under the flange. Tighten to the recommended torque.

FAQS & CASE STUDIES

Type 1055

This unique solution enables solid plate flooring to be fitted to open-mesh or open-grid flooring using simple hand tools.

- Fast installation from above, no expensive scaffolding needed.
- Stainless steel for high corrosion resistance.
- Superior clamping force from high quality castings.
- Safely retrofit without welding.

Material: Cast stainless steel, self colour.

Product Code	A4-70 Bolt Z	Floorplate Thickness t	Clamping Range C	Grating Bar Width W	Hole Ø d	Csk Ø D	Setscrew	
							Tight. Torque ft lb	Hexagon Key mm
LFG1055	M8 (5/16")	min 1/4"	1 3/8" - 2 3/16"	1/8" - 5/16"	1 5/8"	2"	8	5 (3/16")

- Safe Working Loads (LFG1055): Tensile = 225lbs/bolt (4:1 FoS) Slip = 34lbs/4 bolts (4:1 FoS)
- Designed for pedestrian walkways only.

How to install...

- 1) Insert the pre-assembled Type 1055 into the countersunk hole between the grating bars.
- 2) Use an 5/16" hexagon key to rotate the plug anti-clockwise until the underside of the plug locates against the grating bar.
- 3) Use a 3/16" hexagon key to rotate the countersunk setscrew clockwise until the grating lug makes contact with the grating bar.
- 4) Tighten the setscrew to 8ft lb; the grating lug will be drawn up the screw and will activate the thread locking adhesive.

GIRDER CLAMPS | LIFTING POINTS | HOLLO-BOLT | FLOOR CONNECTIONS | PIPE SUPPORTS | FAOS & CASE STUDIES

The Type F3 has a large clamping range to suit various flange thicknesses (see page 68).

Pipe / Conduit Supports

Easy-to-install connections for suspending building services from structural or secondary beams. Typical applications include supporting HVAC equipment, pipe work, fire protection and sprinkler systems. Adjustable to allow a fast, precise alignment of building services.

Type FLS
page 65

Type F3
page 68

Type FL

Type FLS

A versatile flange clamp with a swivel unit for inclined applications. Supplied with a high tensile setscrew for a secure grip on both parallel and tapered flanges.

NEW: Independently fire tested in accordance with ASTM E-119 for a duration of 120 minutes. For fire-resistance load limits please contact Lindapter.

Material: High grade alloy steel, zinc plated.

Product Code	Rod Y	Safe Working Load (FOS 4:1)		Clamping Range W	Setscrew* Z	Tightening Torque		Dimensions				
		Tensile ≤ 25° lbs	Tensile 25° to 45° lbs			Setscrew Z ft lb	Locknut N ft lb	R	T	U	X	Width
LFLS037	3/8" UNC	550	330	1/8" - 11/16"	M10 (3/8")	13	13	2 3/16"	2 1/8"	2 1/4"	1 1/16"	1 1/8"

* Metric setscrew supplied.

Independently Approved Applications

General Applications (Parallel Flanges only)

How to install...

- 1) Locate the FLS onto the flange.
- 2) Ensuring the lug nut (M) locates into the main body, tighten down the setscrew (Z) and locknut (N).
- 3) Install the 3/8" UNC threaded rod by screwing into the nut located in the nut basket (S). Ensure full thread capture.
- 4) Secure assembly in nut basket (S) from beneath using a nut (not supplied).

➤ Ensure that the cup point setscrew always grips on the tapered side of the flange.

Type FL

FM and VdS approved flange clamp for use with parallel or tapered flange beams, supplied with the rear hole drilled or tapped.

NEW: Independently fire tested in accordance with ASTM E-119 for a duration of 120 minutes. For fire-resistance load limits please contact Lindapter.

Material: Malleable iron, zinc plated.

Product Code				Safe Working Load (FOS 4:1) Tensile lbs	Clamping Range W	Setscrew ¹⁾ Z	Tightening Torque		Dimensions			
Drilled Hole	Tapped Hole	Drilled Hole Ø Y	Tapped Thread Y				Setscrew Z ft lb	Locknut N ft lb	T	U	X	Width V

LFL050C	LFL050T	1/2"	1/2" UNC	700	1/8" - 15/16"	M10 (3/8")	6	16	2"	1 13/16"	1 1/8"	1"

* Also available in stainless steel.
1) Metric setscrew supplied.

▶ The Type FL can be used with Type SW (page 67) when connecting to inclined sections.

How to install...

- Slide the Type FL onto the beam flange and tighten setscrew to the recommended torque. As a guide, tighten the setscrew finger tight and then apply an additional quarter turn (90°) with a 1 1/16" wrench.
 - Tighten the locknut (N) to the recommended torque.
- ▶ On tapered flanges, the cup point setscrew has to grip on the inside of the flange.**

Type LC

A flange clamp with tapped holes to accept threaded rod or cable clips. Supplied with a high tensile cup point setscrew for parallel or tapered flanges.

Material: Malleable iron, zinc plated.

Product Code	Tapped Thread		Safe Working Load (FOS 4:1)			Setscrew* Z	Tightening Torque		Dimensions		
	X	Y	Tensile in Position X lbs	Tensile in Position Y lbs	Clamping Range W		Setscrew Z ft lb	Locknut N ft lb	T	U	Width V
LLC025	1/4" UNC	1/4" UNC	40	135	1/8" - 11/16"	M6 (1/4")	3	3	1"	17/16"	7/8"

* Metric setscrew supplied.

➔ Installation is the same as Type FL (page 66).

Type SW

A swivel unit for applications on inclined beams complete with a M10 (3/8" x 3 9/16") Grd. 5 setscrew and nut. Can be supplied with Type FL.

Material: High grade alloy steel, zinc plated.

Product Code	Rod*	Safe Working Load (FOS 4:1)			Rotation	Tightening Torque ft lb	Dimensions		
		Tensile lbs	Maximum Inclination	U			R	Width with Bolt V	
LSW037	M10 or 3/8"	540	18°	360°	8	13/4"	1"	13/8"	

* Secure threaded rod (either M10 or 3/8") to the Type SW using a standard nut.

Type F3

An FM approved, high strength flange clamp with a large clamping range.

For heavier loads or wider clamping range, please see the Type F9 on page 30.

Material: Malleable iron, hot dip galvanized.

Without Bolt Product Code	With Bolt		Safe Working Load (FOS 4:1) Tensile lbs	Clamping Range W	Tightening Torque* ft lb	Dimensions

* Torque figures based on fasteners in an unlubricated condition. For further information see page 70.

- For parallel flanges only.
- Supplied without bolt or with bolt (contact your local distributor for details / options).

Type HW / HC

For vertical suspension on angled surfaces of up to 10° swing either side of the vertical.

Material: Malleable iron, zinc plated or hot dip galvanized.

Product Code		Rod Z	Dimensions				
Hemispherical Washer (can be used without cup)	Hemispherical Cup		Hemispherical Washer X	W ₁	Hemispherical Cup Y	W ₂	Hemispherical Washer & Cup L

Type TC - Toggle Clamp

Designed for service suspension from pre-cast hollow core slabs (minimum core depth 3").

Material: Steel strip, zinc plated.

➔ Safe Working Loads subject to the strength of the supporting section.

Product Code	Drop Rod	Hole Ø	Safe Working Load (FOS 4:1)		Tightening Torque ft lb	Dimensions		
			Tensile / 1 Rod lbs			T	W	Width V
LTC037	3/8" UNC	1"	550		7	2 11/16"	1 1/16"	9/16"

How to install...

▶ Watch the installation at www.Lindapter.com

Instructions for hollow core slab:

- 1) Pre-assemble the clamp on the rod and insert into the hole (ensure it is central to the hollow core).
- 2) Shake the rod to allow the toggle body to locate horizontally across the hole, then lower the rod so that the nut locates in the toggle body.
- 3) Wind up the rod to the top of the section so it is as high as possible. Secure the assembly with a nut and washer.

Tightening Torque and DTI Washers

Important information about the tightening torque values published in this catalog can be found below. Additional information about the use of DTI Washers is also provided.

Tightening Torque Values

All torque figures given in this catalog are for fasteners in an **unlubricated condition**. The use of these torque figures with lubricated or greased threaded fasteners and hexagon nuts will apply a much higher preload and may result in damage to the clamp and fastener. When using lubricated fasteners with a Lindapter component, a reduced torque value should be used. Please contact your bolt and nut supplier for information on the alternative torque for the selected lubricant to ensure the correct preload is generated.

Using DTI Washers

If preferred, DTI washers can be used as part of the fastener assembly with the components shown in the table below. The use of this type of washer can be used with lubricated fasteners and provides a visual indication that the correct preload has been achieved in the bolt. Alternatively, Tension Control Bolts in accordance with ASTM F959 may be used with the Type AF/AAF.

Lindapter Product	Bolt Grade	DTI Washer (ASTM F959)	
		Standard Connection	ICC-ES Approved Connection
Type AAF 	A325 or A490	Recommended	Required
Type AF 	A325 or A490	Recommended	Required
Type CF 	A325	Recommended	Not Applicable

➤ Other Lindapter products have lower torque values to limit the amount of preload on unlubricated bolts and cannot be used with DTI washers.

Product Durability

The durability of the Lindapter product is achieved by coating or by use of stainless steel and is categorized by Corrosivity Class in accordance with ISO 9223. For Corrosivity Class C4 and C5 please contact Lindapter.

Corrosivity Class	Galvanized Steel	Steel with Sheraplex finish	Electro-plated Steel + JS500	Electro-plated Steel	Stainless Steel
C1	more than 50 years	more than 50 years	more than 50 years	more than 20 years	more than 50 years
C2	more than 50 years	more than 50 years	more than 20 years	more than 5 years	more than 50 years
C3	more than 20 years	more than 20 years	more than 10 years	Not suitable	more than 50 years

➤ For Corrosivity Class information, see www.steelconstruction.info/Standard_corrosion_protection_systems_for_buildings

FAQs about Lindapter Girder Clamps

Below you'll find answers to the questions we get asked the most about Lindapter Girder Clamps. If your question is not answered here please contact Lindapter's Technical Support team.

Can location plates be made to any dimensions?

No. Details of the minimum sizes are shown in this catalog and on the website.

Are Lindapter assemblies reusable?

If an assembly which has not been subjected to dynamic or fatigue loading is repositioned and reused, a visual inspection should be carried out to check the condition of the components and the protective coating.

If any signs of physical damage or corrosion to the clamps or plates can be seen, the full assembly should be replaced.

Do tail length and packing combination calculations have to be exact?

The tables within the catalog or on the website should be used for guidance on tail lengths and packing combinations; there is a tolerance which varies depending on the bolt diameter.

Is it possible to use Lindapter products with proprietary concrete anchors?

Yes, but it may be necessary to reduce Lindapter's recommended bolt tightening torque to comply with the anchor bolt manufacturers figures; if so, this is likely to affect the connection capacity.

Will clamps damage my steel surface coating?

The material from which Lindapter clamps are manufactured should not damage the structure although removal marks could be in evidence on some surface coatings.

Can Lindapter connections be used in a combined tension and friction / slip resistance load?

For Lindapter products with both tension and slip loads published, combined loading is permitted. Please refer to AISC 360 for details.

Why do location and end plates have to be made to a certain minimum thickness?

As well as positioning all the components, the location plate supports the tail of the clamp. On girder clamp assemblies the plate does not have to be as thick as it does for end plates; the reason for this is that the tail of the clamp on the bottom beam is trying to bend the plate but this is counteracted by the clamp's tail on the top beam.

With end plates there is no counteracting clamp, hence the plate needs to be thicker to support the tail. Plate thicknesses may be able to be reduced by using higher grade/strength material.

Are Lindapter assemblies affected by vibration?

Although tested and approved for situations where they will be subject to vibration conditions, we would recommend that, in circumstances where this could be extreme, a proprietary locking device / anti-vibration washer can be used.

Can Lindapter Type F9 be used to connect beams together?

It is possible if the beams are running parallel to each other but they must be of the same type and width although a Lindapter Girder Clamp is a much better option; the Type F9 must never be used to connect beams together which are crossing at 90° to each other or have tapered flanges.

Can Lindapter assemblies be used as permanent connections or are they only for temporary use?

They can be used in temporary and permanent applications. Lindapter has details of applications that have been installed for 50 years or more.

FAQs about Lindapter Girder Clamps (continued)

Below you'll find more answers to the questions we get asked the most about Lindapter Girder Clamps. If your question is not answered here please contact Lindapter's Technical Support team.

How long will Lindapter assemblies last in an exterior environment?

The best coating would be Hot Dip Galvanizing. Longevity would depend on the background corrosion rate evident in the location it is intended they be used; guidance should be sought from the galvanizers association of the relevant country.

Is it possible to use stainless steel fasteners with Lindapter products?

It is not recommended as it is likely to create a mechanism for the onset of bi-metallic corrosion. They can however be used with the Lindapter Type LS which is manufactured in stainless steel.

Why is there such a high 'Factor of Safety', typically 5:1, on Lindapter connections?

This recommended 'Factor of Safety' is to ensure that the components are subject to loads well within their capacity range in normal working condition but in event of an unintentional overload of the component / assembly there is sufficient strength within the clamps to avoid damage and / or failure of the connection. A lower FOS must not be used without first seeking advice.

Why is the frictional Factor of Safety on Lindapter Type AF only 2:1 and not 5:1 as it is on the tensile Safe Working Loads?

The published safe working load and 2:1 factor of safety is a recognized method of determining slip and is defined according to the Eurocode as the load corresponding to 0.004" (0.1mm) of movement. As the safe working load is based on movement of 0.004" it is acceptable to use a reduced factor of safety of 2:1.

Do I need to use a torque wrench when assembling a Lindapter connection?

Yes, we always recommend the use of a calibrated torque wrench. It is important to tighten up the fasteners to our published torque figures to ensure it replicates test conditions so that the Safe Working Loads can be achieved.

Can I use Lindapter clamps in slotted hole connections?

Yes, but it is important that the slot is 'bridged' to ensure that the tail of the clamp does not fit into it. This can be done by using a product with a full width tail such as Types AAF, AF, LR or LS.

For additional guidance on slotted holes, please refer to AISC Section J3 and the RCSC.

Is it possible to use Lindapter products either sub-sea or within the splash zone?

Yes, although consideration has to be given to the proposed material or coating used; splash zones can be more aggressive than total submersion.

What is the recommended Lindapter safe working temperature range?

As a general rule -22°F to +662°F; however, this can increase or decrease in certain situations. For example, the Type AAF clamp is tested to -76°F. Carbon steel Hollo-Bolts have been tested to -50°F.

What should be considered when connecting a pre-drilled section to an existing beam?

Make sure the section is thick enough to counter the reaction from the tail of the clamp. The thickness shall be at least as thick as the designated end plate thickness for the specified clamp.

FAQs about Lindapter Hollo-Bolts

Below you'll find answers to the questions we get asked the most about Lindapter Hollo-Bolts. If your question is not answered here please contact Lindapter's Technical Support team.

Can the Hollo-Bolt be used in concrete?

No. It is designed as an expansion bolt for HSS of all shapes and sizes or where access is available from one side only.

Why is there a minimum outer ply requirement when using 5/8" and 3/4" Hollo-Bolts?

To ensure the unique collapse mechanism (rubber washer) does not compromise the shear capacity of the Hollo-Bolt by being within the shear plane.

Is it possible to reuse the Hollo-Bolt?

No, although a new Hollo-Bolt can be inserted in the existing hole.

Is it necessary to seal the Hollo-Bolt to prevent ingress of water?

This is not always necessary especially on the larger size 5/8" and 3/4" Hollo-Bolt HCFs where the collapse mechanism (rubber washer) expands to fill the void. Sealing washers are available; however, it is important the interface between the HSS face and plate or bracket is not ignored.

Can I use slotted holes in Hollo-Bolt connections?

Yes, as long as the slot is in the outer ply only and is perpendicular to the shear load. Refer to the RCSC for additional washer requirements. Please note the Hollo-Bolt has not been tested in slip-critical connections.

Which Hollo-Bolt load table should I use?

For simple connections with unfactored loads use the capacity figures shown on pages 46-48 (5:1 Factor of Safety). The Hollo-Bolt LRFD and ASD Design Strengths figures on pages 50-55 (taken from ESR-3330) are to be used only when designing a bolted connection to **AISC 360**, **AISC 341**, and **ASCE/SEI 7** as referenced by the locally adopted building code.

Can the Hollo-Bolt be used in all shapes and sizes of HSS?

Yes. It can be used in square, rectangular, circular, and other profiles where access is restricted to the outer face. In all cases however the suitability of the component is subject to the available void space, the total thickness of the material to be clamped and in the case of circular sections, the radius of the outer face.

Is it possible, however slightly, to exceed the maximum Hollo-Bolt clamping thicknesses published in the catalog?

No. The figures are accurate depictions and should not be exceeded under any circumstances.

How do I remove a Hollo-Bolt?

Using a power / hand tool to remove a pre-installed Hexagonal or Countersunk Hollo-Bolt (sizes 5/16", 3/8" and 1/2"):

- 1) Set the power / hand tool to reverse mode (anti-clockwise rotation).
- 2) Place a suitable size wrench (depending on collar size) on the flats of the collar to hold in place.
- 3) Use the power / hand tool to loosen the bolt.
- 4) Continue in reverse mode until the cone on the inside of the HSS at the other end of the bolt, is released to drop inside the HSS.
- 5) The bolt can now be removed as can the sleeve by prying the collar with a pinch or crow bar.

Using a power / hand tool to remove a pre-installed Hollo-Bolt High Clamping Force (sizes 5/8" and 3/4"):

- Steps 1) to 3) same as above.
- 4) Continue in reverse mode until the cone, expanded sleeve, and rubber washer on the inside of the HSS, at the other end of the bolt are released to drop inside the HSS.
 - 5) The bolt and loose collar can now be removed.

Proven connection solutions

Lindapter products are used in multiple industries around the world in an extensive range of applications. The case studies below highlight the wide use of Lindapter connections. To view more project examples please visit www.Lindapter.com

American Copper Buildings, NY

© Technic Photo

Product: Type AAF

Application: Connecting a steel grid to the structural beams on the sky-bridge structure.

The sky-pool is on the bottom floor of the three-story fitness and leisure complex, which bridges the gap between the two towers, high above New York City.

Engineers specified Lindapter's Type AAF clamps for connecting a steel grid to the trusses to create a frame for the façade panels to be installed onto the sky-bridge. Type AAF was chosen due to its high strength capacity and longevity.

The adjustability of the product allowed the contractors to quickly, align and secure the frame into position without drilling or welding, saving the contractors time and money on this prestigious project.

FAQS & CASE STUDIES

One Manhattan Square, NY

Product: Hollo-Bolt™

Application: Connecting the grid-shaped Hollow Structural Section (HSS) steel frame.

Lindapter Hollo-Bolts allowed this residential structure to be erected faster than conventional construction techniques.

The spliced HSS connection detail was designed to minimize assembly work in the field. Long sections were fabricated with pre-drilled connection plates welded to one end of each section on all four sides of the square HSS.

When positioned vertically to create a column, the four plates protruded above the height of each HSS, essentially forming a 'socket' for the section above to be located into. Contractors simply inserted Hollo-Bolts into the pre-drilled holes and tightened with a standard torque wrench.

➤ See pages 41 - 55 for Hollo-Bolt.

Benjamin Franklin Bridge, PA

Product: Grate-Fast™ Stainless Steel

Application: Securing open grate flooring for maintenance access.

This suspension bridge connects Philadelphia, PA and Camden, NJ across the Delaware River. Lindapter's Grate-Fast was used to secure open bar grating to maintenance platforms along the length of the bridge.

The Grate-Fast has a cast malleable iron body that provides superior clamping force over the life of the connection and is Lloyds Register approved for resistance to shock and vibration.

Contractors used standard hand tools to secure the grating and this simple installation process resulted in the project being delivered on time and on budget.

➤ See page 62 for Grate-Fast.

Proven connection solutions

Lindapter products are used in multiple industries around the world in an extensive range of applications. The case studies below highlight the wide use of Lindapter connections. To view more project examples please visit www.Lindapter.com

citizenM Hotel Seattle, WA

"It's about 4 months faster to do modular versus conventional, what would typically take about 17 months on a more traditional hotel, can be done in about 13 months when building modular."

Mortenson Construction Project Manager Lauren Boedeker

Product: Hollo-Bolt™

Application: **Connecting modular units during the construction of this hotel in Seattle.**

Polcom was appointed to build 228 modular units for this new hotel in Seattle. The traditional method of connecting the units together by drilling and bolting was not appropriate and hot welding risked damaging the waterproof membrane.

Special steel structural shear plates were designed and added to the modules. Hollo-Bolts were then used to connect through the shear plates to the Hollow Structural Sections (HSS) of each module.

High strength capacity Hollo-Bolts provided a drilling and weld free connection that was quick and easy to install without damaging the waterproof membranes.

➔ See pages 41 - 55 for Hollo-Bolt.

Alexander Hamilton Bridge, NY

Product: Type AF
Application: Structural support connections on a bridge refurbishment.

Widening the bridge deck to introduce two additional traffic lanes required adding cantilever brackets to the main arch span to support the new deck. Structural Engineers specified Lindapter Girder Clamps (approved by NYSDOT) to connect the necessary temporary supports.

Type AF clamps were configured in a customized assembly to suit the flange thickness and angle of each tapered cantilevered bracket. The connection provided the required load capacities and did not require welding or drilling in the field, resulting in a quick and convenient way to temporarily support the cantilevered brackets.

➔ See page 11 for Type AF.

American Helicopter Museum, PA

Product: Lifting Point LP4
Application: Suspending helicopters from the museum ceiling.

Lindapter steel connections were supplied to The American Helicopter Museum for the suspension of an Enstrom F28A Helicopter. Weighing in at over 1500lbs, it is well within the capability of the lifting point, which was fitted with an eye bolt without drilling or welding. Connections have also been specified for arenas and theaters in lighting and sound rigging equipment, as well as in sports facilities to suspend heavy equipment.

Lindapter can design and manufacture customized lifting points for your specific load requirements free of charge. The Type ALP is also available as an off-the-shelf adjustable lifting point that adjusts to suit the beam width, flange thickness and the orientation of the lift.

➔ See page 39 for Lifting Points.

Proven connection solutions

Wilshire Grand Center, CA

Product: Hollo-Bolt™

Application: Securing primary steel tubes (HSS) which form the canopy of this skyscraper in Los Angeles.

3,000 Hollo-Bolts were used to connect steel tubes which form the curved canopy structure. They were installed from just one side, rapidly achieving discreet splice connections without drilling or welding in the field.

The cost-effective installation did not require specialist equipment or labor and reduced the amount of work at height in comparison to welding or through-bolting.

The design eradicated the possibility of tube deformation that can be associated with through-bolting if the bolts are over-tightened. The result was aesthetically pleasing, clean and discreet connections which complement the architecturally exposed structural steel design.

➔ See pages 41 - 55 for Hollo-Bolt.

Allegiant Stadium, NV

© Jason O'Rear

Product: Type AAF
Application: Connecting a 275 foot electronic media mesh screen to the stadium's exterior.

To secure the huge video screen to the front of this \$1.8 billion structure, contractors used 4,200 of Lindapter's high slip resistance Type AAF Girder Clamps to connect the brackets and plates to the structural columns.

Type AAF Girder Clamps provided a drilling and weld free connection that was quick and easy to install whilst working at height. Type AAF self-adjusts to suit the flange thickness which allows assemblies to be positioned close to where they are needed before final adjustments are made. The clamps can then be fully tightened using a calibrated torque wrench. Before the screen was installed the clamps were painted black to match the stadium's color scheme.

➔ See page 10 for Type AAF.

Tobin Memorial Bridge, MA

© mansmart via Flickr (CC BY-SA)

Product: Hollo-Bolt™
Application: Connecting checker plate walkway covers on the safety curbs.

Due to limited access to the 11,800 ft long bridge structure, a bolted connection with one-sided access was required for the repair of the safety curbs on the walkway. Over 50,000 Hollo-Bolts were specified due to their high strength capacity and ability to be installed from one side of the bridge steel.

The checker plate covers were formed off-field into "S" shapes and then installed onto the safety curbs using 1/2" stainless steel Hollo-Bolts with hexagonal head on the vertical sections. 5/16" stainless steel Hollo-Bolts with countersunk head were then used on the horizontal sections to reduce trip hazards for bridge maintenance personnel and contribute to a safer walkway.

FAQS & CASE STUDIES

Passionate about safety

For over 90 years, Lindapter has manufactured to the highest standards, earning a multitude of independent approvals and a reputation synonymous with safety and reliability. Current accreditations are detailed below.

Quality, Environment and Traceability

Accredited to **ISO 9001** since 1986, Lindapter strictly enforces a quality management system that includes rigorous product testing to ensure consistently high manufacturing standards. As part of Lindapter's ISO 9001 quality management system and in compliance with the Construction Products Regulation, Lindapter operates a comprehensive Factory Production Control system that ensures traceability of all Lindapter products throughout the manufacturing process.

The company also operates an **ISO 14001** certified environmental management system, constantly monitoring and improving aspects of the business that may impact on the environment, such as the use of natural resources as well as handling and treatment of waste and energy consumption.

Independent Product Approvals & Associations

These approvals reinforce Lindapter's extensive in-house testing procedures. Products are tested so that Engineers and Contractors can be confident Lindapter products will perform as detailed in this catalog.

ICC-ES
North America's leading evaluation service has approved multiple Lindapter products to be compliant with the International Building Code. Girder Clamps (Types AF and AAF) and Hollo-Bolts are ICC-ES approved to resist wind and seismic loads.

CE Mark
CE Marking provides additional assurance that a product complies with the Construction Product Regulation and will perform as stated in the corresponding Declaration of Performance (DoP).

UKCA Mark
This demonstrates compliance with the Construction Products Regulation in Great Britain. Independently verified product specification data, including Characteristic Resistances for designing connections to Eurocode 3 are published in Declaration of Conformity (DoC) documents.

VdS Schadenverhütung GmbH
VdS is a leading independent testing institution in Germany for products used in fire protection applications.

Factory Mutual
This American insurance organization offers an approval that is recognized by the fire protection industry worldwide.

Lloyd's Register Type Approval
Lloyd's Register Type Approved products have been subjected to tensile, frictional, vibration and shock tests, witnessed and verified by Lloyd's Register.

TÜV Nord
TÜV is the certifying authority for safety, quality and environmental protection in Germany.

Associations

Lindapter is a member of the **American Institute of Steel Construction (AISC)**, **Canadian Institute of Steel Construction (CISC)**, **British Constructional Steelwork Association (BCSA)**, **The Steel Construction Institute (SCI)**, **Southern African Institute of Steel Construction (SAISC)** and the **Australian Steel Institute (ASI)**.

Live Webinars

We are pleased to offer live webinars **free of charge** to Structural Engineers, Consulting Engineers, Graduate Engineers and Specifiers. More information is below, to view our webinar schedule and to register visit www.Lindapter.com

Designing Steel Connections Without Drilling or Welding

Gain an update on the latest ICC-ES approved steel-to-steel connections and an insight to the technical and practical advantages of specifying innovative clamping systems. Our experienced presenter will introduce a range of faster, cost-effective alternatives to conventional bolted and welded connections at a date and time to suit you.

Introduction to Lindapter

- Our history which began in 1934.
- Market sectors and industries we supply.
- Global brands we have worked with.

Conventional Connection Methods vs Lindapter Method

Overview of welding and drilling and bolting versus Lindapter clamping systems.

Innovative Solutions

- Girder Clamps for connecting steel sections.
- Floor connections for steel plate and open bar grating.
- Hollo-Bolt expansion bolts for connecting to HSS.

Typical Applications, Installation and Case Studies

See a wide selection of typical assemblies that are possible with Lindapter products and find out how other customers have used them to solve problems in real case study examples. Video animations are also used to demonstrate the simplicity of installation.

Technical Support (Free Connection Detailing)

Learn about our industry leading Technical Support services, including FREE connection detailing, site visits and contractor product installation training.

Research & Development (Engineered Solutions)

Do you have a unique connection problem? Our R&D facility can work with you to develop custom products and solutions.

Q&A Session

Submit your questions during the webinar and our experienced presenter will answer as many as possible at the end during a live 10 minute Q&A session.

To view our webinar schedule and to register free of charge visit www.Lindapter.com

Disclaimer

Lindapter International supplies components in good faith, on the assumption that customers fully understand the loadings, safety factors and physical parameters of the products involved. Customers or users who are unaware or unsure of any details should refer to Lindapter International before use. Responsibility for loss, damage, or other consequences of misuse cannot be accepted. Lindapter makes every effort to ensure that technical specifications and other product descriptions are correct. 'Specification' shall mean the specification (relating to the use of the materials) set out in the quotation given by the Seller to the Buyer. Responsibility for errors or omissions cannot be accepted. All dimensions stated are subject to production tolerances - if in doubt please check with Lindapter. In the interests of improving the quality and performance of Lindapter products, we reserve the right to make specification changes without prior notice.
